For our customer, one of Austria's most successful technology corporation, we are looking for a responsible and enthusiastic personality to enhance the high-qualified IT-Team in ***Vienna (fulltime) henceforth.***

Senior IT Architect (f/m)

Your responsibilities:

- Definition, design and communication of system architectures, in the Electronic Toll Collection and ITS domain, including architecture rationale, collaboration and different architecture views
- Driving architecture strategy in frameworks, platform integrations, and technology roadmaps
- Evaluating architectures and exploring alternative solutions and possible ways of building a system
- Verification of the consistent implementation, maintaining and improving the architecture throughout the delivery phase
- Provision of inputs to continuous quality improvement of development artefacts and processes
- Analysis and consideration of various design constraints resulting from the customer projects (costs, realization timeline, resources), lifecycle aspects (e.g. integration, verification/validation, operations, maintenance, …) and enterprise policies and strategy (e.g. portfolio management, enterprise architecture, strategic re-use, …)
- Proactive contribution to the innovation process and build up new competencies
- Technical interface to the costumer and to internal technical resources
- Close cooperation with developers, infrastructure, operation and project management department to ensure proper implementation
- Requirements engineering, preparation of specifications for electronic toll collection and telematic systems
- Interface and coordinate tasks with internal and external technical resources

Your Profile:

- Master degree in software engineering, computer science, information technology, electrical engineering or similar
- At least 3 years of professional software architecture and development experience or similar professional experience in other architecture areas (e.g. IT architecture)
- Ability to think strategically and understand the long-term ("big picture") and short-term perspectives of situations
- Ability to estimate the financial impact of architecture alternatives
- Experience in enterprise class software requirements including security, scalability, and Usability
- Expert skills in software engineering methodology und technologies for large-scale distributed systems, e.g., UML/SysML modelling, architecture and design patterns, component technology/OO, services/SOA, message-oriented middleware, software refactoring
- Excellent knowledge of software development methodologies and processes
- Strong analytical problem solving and decision making skills
- Passion to drive collaboration across distributed locations, stakeholders and deliver highquality results
- Flexibility and willingness to travel
- Excellent oral and written English and German

Customer Offer:

- An interesting full-time position with high responsibility within one of our growing markets
- A hands-on onboarding with an experienced team to get familiar with the business and domain-related processes
- An international working environment and exciting challenges with room for new ideas
- Social benefits and infrastructure (operating restaurants, near subway etc.) of a modern company
- A market compliant gross salary – minimum € 55.000 p.a. - according to your qualifications and your job experience
- Start date: as soon as possible
- Ongoing professional education and training measures
